To PDX Harbor Superfund:

The Willamette River is a well known river nation wide and it shouldn't be known to be polluted. Industry has placed containments in the river and it hasn't been cleaned up on it's own for the past 40 plus years. So why does the agency think the river will clean itself in the next 30 years with a little help. The key work is little. The agency is placing people lives in danger who eat fish from the river. So if the river isn't clean up the agency is responsible for all the lives that eat fish from the river and die due to containment's. Is it ok for your father or daughter to eat containmented fish and die??

With Climate Change the planet needs all the help it can get to correct man's effects and the Willamette has been altered by man's acts. We as a society can no long ignore these effects. This river has heritage and needs the most/best protection. The pacific NW has been dramatically effected by climate change and humans need to take responsibility and take corrective action. By says the river will clean itself in 30 years when it hasn't in the past in unreal.

Please do the right thing and properly clean our river and not ignore our responsibilities.

The river needs help.
